1. Introduction:

=====

This Read Me file contains product information for the ATAAPS Graphical User Interface (GUI) for Microsoft Windows 95/NT.

For full instructions on using the ATAAPS GUI please refer to the Help menu choice included with the application.

2. Tech Support:

=====

Please refer problems and questions to:

DFAS SEOPE Customer Support Help Desk at
COMM(850) 452-2990 ext 310
DSN 922-2990 ext 310

3. Systems Change Requests included in this release:

=====

SCR X0008

Area Impacted:

ATAAPS Main Application

Modifications:

This SCR adds 14-day labor functionality to the Labor Reporting Module. Users can now enter time for an entire pay period on one screen which provides faster and more productive labor reporting processes. The 14-day labor screen also introduces the injury number and temporary shift override code fields contained in SCR X0022. These

fields will allow users to claim against injury numbers and override their scheduled tour.

SCR X0022

Area Impacted:

ATAAPS Database Administrator
ATAAPS Main Application
ATAAPS Standard Reports
DCPS Payroll Interface
SOMARDS Accounting Interface Application

Modifications:

This SCR includes the edits, validations and data fields necessary for the input and processing of injury numbers and temporary shift override codes where applicable. The addition of these fields will allow ATAAPS users to correctly apply type hours of COP Traumatic Injury, COP Light Duty, Military Leave and Extended Worker's Compensation for labor reporting. The addition of the injury number will also allow DCPS to accept labor transactions of the above mentioned type hours.

SCR X0141

Area Impacted:

ATAAPS Main Application

Modifications:

This SCR incorporates the necessary modifications to allow for successful certification of employees via the daily certification window.

SCR X0146

Area Impacted:

ATAAPS Main Application

Modifications:

This SCR modifies the exception handling in the Default Labor Stored Procedures to return a message which will more specifically identify the reason for the exception. Displaying a specific exception message allows the user to respond quicker to exceptions.

SCR X0147

Area Impacted:

ATAAPS Main Application

Modification:

This SCR removes the reference to the schema owner name from the default labor process by adding the stored procedures to the package that contains the type declarations. This provides a more generic database environment rather than requiring the same name for all schema owners.

4. Technical Notes:

=====

The install will incorporate all ATAAPS executable and runtime libraries. THIS IS A FULL INSTALL.

*** Installing ATAAPS ***

Refer to the 99-3 installation instructions provided.
